

Dear Sir, Madam,

Please find enclosed in attachment the comment Noe21 would like to add following your public consultation.

Noe21 is a Geneva based independent NGO
Specialised in solutions to climate change
Noe21 is member of:
European environment bureau EEB
CAN-Europe
Accredited to the UNFCCC

We at Noe21 have been expecting and hoping for the last three years that the EU Commission takes the decision to bar fake credits from the EU ETS, indeed barring industries that in fact *increase* global GHG emissions. We congratulate you for making sure that climate protection is not subjected to undue financial interests. For your information today Noe21 sent a press release in french expressing our satisfaction with the EU Commission proposal. We stringly support that this proposal is made into a decision in the shortest time.

In the same direction, the CDM system will gain in environmental integrity when the UNFCCCs' Executive Board (EB), like the EU Commission, will adopt a new methodology regarding industrial gases. We encourage you to use your influence so as to have the EB endorse and adopt the proposed new methodology ("AM0001 Incineration of HFC23 waste streams"). The methodology was transmitted officially to the UNFCCC by Noe21, CDM-Watch and eia-international in 2007 and again slightly modified in march 2010.

With my best regards,

Chaim NISSIM, Ing. Epfl
